Operational knowledge audit

20 questions.

Score each question from 0 to 5 with your operations leads. Anything under 3 is a risk you can name, cost and fix this quarter.

Coverage

- ☐ Can a new hire find every critical procedure without asking a colleague?
- ☐ Is each procedure owned by a named person, not a department?
- ☐ Are exceptions and edge cases written down, not remembered?
- ☐ Do procedures contain the real numbers people need in the moment?
- ☐ Is there one place employees trust more than asking a colleague?

Freshness

- ☐ Does every document have a review date that is actually enforced?
- ☐ Do you know which documents are outdated right now?
- ☐ Are superseded versions archived instead of circulating?
- ☐ Does a legal or customer change trigger a document review?
- ☐ Do you measure how old your average procedure is?

Access and control

- ☐ Can you show who has access to which procedure?
- ☐ Can you prove who read and acknowledged a critical procedure?
- ☐ Does knowledge stay inside your own infrastructure?
- ☐ Can you produce an audit trail for the last 12 months?
- ☐ Would a customer or auditor accept your evidence today?

Learning loop

- ☐ Are unanswered questions recorded instead of lost in chats?
- ☐ Does someone own closing those gaps within a deadline?
- ☐ Is training built from the same documents used in daily work?
- ☐ Do you retrain people when a procedure changes materially?
- ☐ Do you review one knowledge KPI in your weekly management meeting?

Turn the audit into a plan

Send us your scores and we will map each low score to a concrete 30-day action, with or without OPSQAI. Free workshop: opsqai.de/contact
