

CHECKLIST

30 days to digitise *your operating procedures.*

A week-by-week plan any operations team can run without consultants: collect what exists, standardise it, make it answerable, and keep it current.

Week 1 — Inventory

- ☐ List every process a new hire needs in their first 30 days.
- ☐ Collect existing documents: files, chats, emails, printed folders.
- ☐ Name one owner per process. No owner means no procedure.
- ☐ Mark the five processes where mistakes cost the most money.
- ☐ Record how people ask questions today (who they call, when).

Week 2 — Standardise

- ☐ Write each of the five critical processes on one page.
- ☐ Use the same structure: purpose, trigger, steps, exceptions, contact.
- ☐ Add the real numbers: limits, tolerances, deadlines, thresholds.
- ☐ Remove every step nobody actually performs.
- ☐ Have the person doing the work review the page, not only the manager.

Week 3 — Make it answerable

- ☐ Load the pages into one searchable place with access control.
- ☐ Convert the 20 most frequent questions into short FAQ answers.
- ☐ Check that every answer cites the document it comes from.
- ☐ Define what happens when no answer exists (who gets the question).
- ☐ Test with three employees who did not write the documents.

Week 4 — Keep it current

- ☐ Set a review date per document and an owner reminder.
- ☐ Log unanswered questions as knowledge gaps and assign them.
- ☐ Track acknowledgements for procedures that carry legal weight.
- ☐ Review one KPI weekly: questions answered from documents.
- ☐ Schedule a quarterly audit and archive superseded versions.

Run the last two weeks with OPSQAI

OPSQAI is installed on your own Windows Server. It answers only from your approved documents, records every unanswered question as a knowledge gap, and keeps ownership, review dates and acknowledgements in one place. Free 30-day pilot: opsqai.de/pilot
