

OPSQAI

OPERATIONAL INTELLIGENCE PLATFORM

One workspace for operational knowledge,
AI and intelligence.

OPSQAI brings company knowledge, AI-assisted workflows, learning and operational insights together in one connected platform — available Cloud or Self-Hosted.

MANAGEMENT

DEPLOYMENT

THE CHALLENGE

Operational knowledge is rarely *where people need it.*

In most organizations, procedures, SOPs, FAQs and operational documents are spread across shared drives, wikis, ticket systems and individual inboxes. The knowledge exists — finding the approved, current version at the moment of work does not.

Fragmented knowledge

Documents live in different systems with no shared structure, ownership or lifecycle.

Difficult access to procedures

Employees are not sure which document is approved, current or relevant to their situation.

Repeated questions

The same operational questions are answered again and again by a few experienced colleagues.

Onboarding friction

New employees depend heavily on informal knowledge transfer to become productive.

Limited visibility

Management has little insight into what knowledge is missing, outdated or creating friction.

WHAT IS OPSQAI

One connected operational workspace.

OPSQAI connects the knowledge an organization already has with the people who need it, while helping teams identify missing, outdated or difficult-to-access information. Instead of treating knowledge, learning, AI and management as isolated systems, OPSQAI brings them into one operational workspace.

Six core capability areas.

01

Knowledge

Bring operational knowledge into a structured workspace.

- Knowledge Base
- SOPs and operational documents
- FAQs and notes
- Document lifecycle, age and update visibility
- Version awareness and review signals

Make approved company knowledge easier to find, manage and maintain.

02

AI

Give employees a natural way to interact with approved company knowledge.

- AI Chat
- Answers based on approved knowledge
- Source-backed responses
- Context-aware conversations
- Knowledge Gap detection

Turn approved knowledge into something employees can use when they need it.

03

Learning

Connect company knowledge with onboarding and employee development.

- Academy
- Courses and learning workflows
- Assignments
- Progress tracking
- Knowledge and learning signals

Help employees learn company processes in a structured way.

04

Operational Intelligence

Understand the health of your knowledge and where attention is needed.

- AI Audit
- Knowledge health signals
- Knowledge Gaps
- Friction and learning signals
- Recommendations and suggested actions

Understand where knowledge is missing, outdated or creating friction.

05

Management

Give management a clearer overview of the operational workspace.

- Management Dashboard and KPIs
- User capacity
- Departments, users and roles
- Module access and notifications
- Maintenance visibility

Make important operational signals easier to see and act on.

06

Cloud or Self-Hosted

OPSQAI supports different deployment models.

- Runs in the customer's own environment
- Local AI engine and local database
- Local semantic search
- Offline-capable daily operation
- Backup & Recovery, signed offline licensing

Your knowledge. Your infrastructure. Your AI.

HOW IT WORKS

From company knowledge to *operational clarity.*

01 **Company knowledge**

SOPs · FAQs · operational documents · approved information

02 **OPSQAI knowledge layer**

Structured · versioned · lifecycle-aware · access-controlled

03 **AI + Learning + Analysis**

Grounded answers · courses and assignments · AI Audit · gap detection

04 **Employees and management**

Employees get answers · managers see insights · Knowledge Gaps become visible · recommended actions can be reviewed

A stronger operational knowledge system.

USE CASES

What this looks like day to day.

USE CASE 01

Find the right procedure

An employee needs to know how to handle a specific operational situation. They ask OPSQAI and receive guidance based on approved company knowledge and relevant sources.

USE CASE 02

Onboard faster

New employees can access structured knowledge, learning content and company procedures without depending entirely on colleagues for every question.

USE CASE 03

Find what is missing

Repeated questions and weakly supported requests can reveal Knowledge Gaps. Management can review these gaps and create or improve approved knowledge.

USE CASE 04

Keep knowledge healthy

Document lifecycle and AI Audit signals help identify information that may require review: knowledge not reviewed recently, documents unchanged since their initial upload, and areas where information may be missing.

USE CASE 05

Give management better visibility

Dashboards, KPIs, AI Audit and recommendations help management understand knowledge coverage, Knowledge Gaps, areas requiring support, learning signals, operational friction and recommended actions.

All recommendations remain advisory and require human review.

Your knowledge. Your infrastructure.

Your AI.

OPSQAI Self-Hosted is designed for organizations that want the platform to run inside their own environment.

Local deployment

The application runs on the customer's own Windows machine or infrastructure.

Local AI

The Self-Hosted environment uses a local AI engine.

Local data

Operational knowledge and application data remain within the customer's environment.

Offline-capable

The daily platform workflow can continue without a mandatory Cloud dependency.

Local knowledge search

Knowledge retrieval and semantic search operate within the Self-Hosted environment.

Backup & Recovery

Local backup and recovery functionality supports the Self-Hosted installation.

Offline licensing

Licensing can be cryptographically verified locally.

Role-based access control

Access to modules and content follows roles defined inside the installation.
